- ❖ Data Center Deployment Team
- ❖ 5 **Support** Technicians

- ❖ Pre sales and post sales teams in place
- ❖ VMware and Cloud Certified Engineers

- ❖ Huawei Certified Engineers
- ❖ Microsoft Certified Engineers

Why Cloud?

GROWTH PROCESS FACTOR

Industrial Empowerment

IT'S VIRTUAL

Imagine racks of servers, humming along in a data center. Together, these servers become a massive pool of resources. Divide this "pool" into multiple virtual servers, and you create a "cloud."

IT'S SECURE

For the utmost security, create a private cloud on dedicated hardware. But always remember to put appropriate security measures in place, no matter which cloud you choose.

IT'S FLEXIBLE

Since virtual servers aren't physical, they are super flexible, giving you what you need at the moment. Spin up a server in minutes, and take it down just as easily.

Affordable Technology

IT'S AFFORDABLE

You'll get the greatest cost savings in the public cloud, where your virtual servers run on physical servers that you share with other customers.

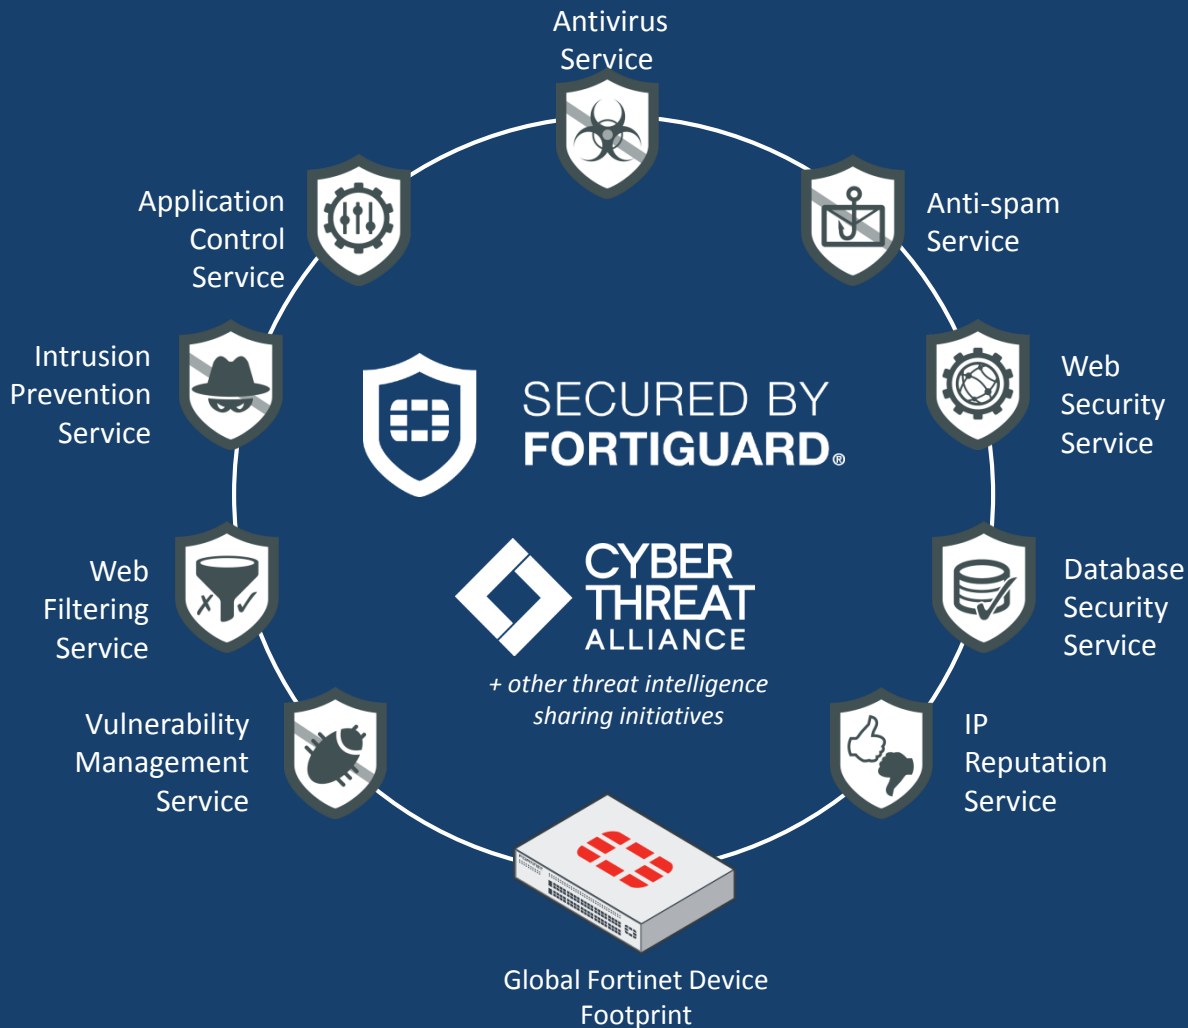

IT'S OPEN

In the open cloud, you can easily move your cloud around—without being locked into one provider or a closed, proprietary technology.

Managed Security Service

Firewall | VPN | Anti-Virus | Web Filtering | Intrusion Prevention | Anti-Spam | DLP

With Internet threats on the increase can you afford not to be protected?

OCTALPHA's Managed Network Security is based on

- Fortinet's award-winning range of Unified Threat Management (UTM) devices.
- Complete Network Protection by integrating multiple security layers into a single platform.
- Integrated approach simplifies network infrastructure and reduces administration costs.

- ✓ *Complete Internet Protection*
- ✓ *24X7 Network Monitoring*
- ✓ *Ongoing Maintenance*
- ✓ *Network Activity Reports*
- ✓ *Security VPN Management*
- ✓ *Deep Packet Inspection Firewall*
- ✓ *Customized Web Content Filter*

Infrastructure Service

Infrastructure

Infrastructure as a Service (IaaS) is a form of cloud computing that provides virtualized computing resources over the Internet. IaaS is one of three main categories of cloud computing services, alongside Software as a Service (SaaS) and Platform as a Service (PaaS).

POWER CONNECTION:

Our infrastructure would not be able to survive without the energy to run it. The expert team at Octalpa and the hardware we use ensure a fail-safe, redundant and clean supply of energy from independent providers 365 days a year.

PERFECT NETWORK CONNECTIVITY:

With Octalpa data centers, we can transport your bits from A to B almost at the speed of light. We always select the best route for your data to guarantee a safe, reliable and fast data transfer.

RELIABLE SERVER MONITORING:

Our whole infrastructure is observed by a high-quality monitoring cluster. External measurement points ensure a view from the outside. This guarantees the rapid detection of routing errors in our infrastructure.

Support Service

Octalpa provides an array of essential IT management services on a flat rate subscription basis to small and medium sized businesses.

- ✓ Strategic technology planning and implementation
- ✓ Maximize technology investments to help your company achieve your business goals through increased productivity and efficiency
- ✓ Proactive support
- ✓ Detailed infrastructure performance reports, asset inventory reports, and end user usage reports
- ✓ Cost-effective and predictable IT budgets
- ✓ Unlimited access to purchasing support, end user training, 3rd party vendor management, resource, and up to date information about the latest technology trends

Virtual Desktop Infrastructure

With Octalpa VDI solution users can access their 'Virtual PCs' using thin clients (TCs), PCs and Mobile devices, while still allowing the enterprise to maintain information security and high service reliability.

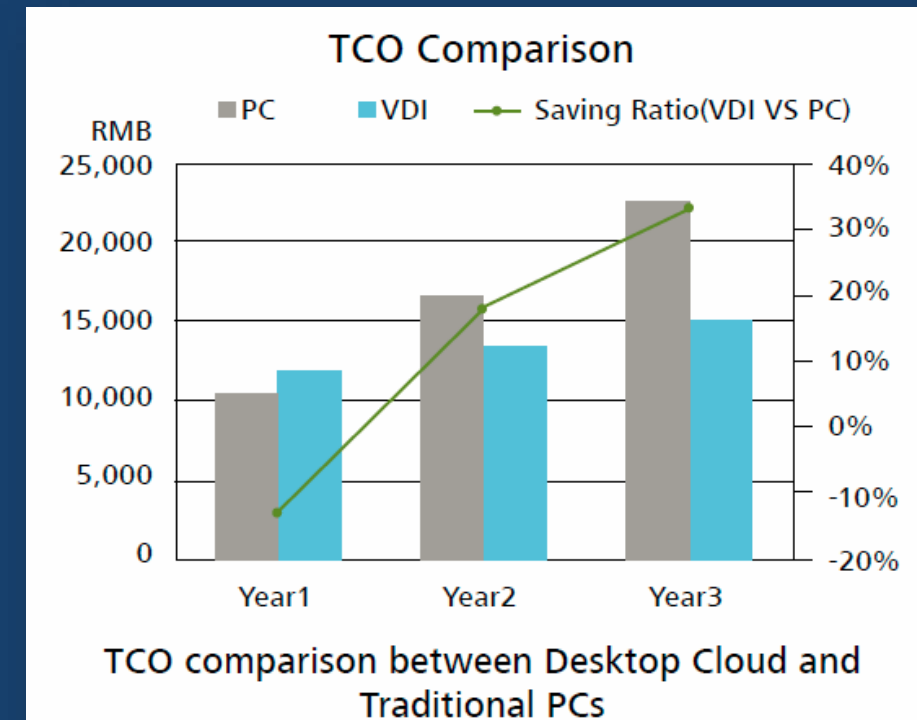

- High Reliability & 99.9% Uptime
- Improve Management Efficiency
- Increase Security and Reliability
- Work Anytime, Anywhere, Any Device
- Improve Employee Productivity

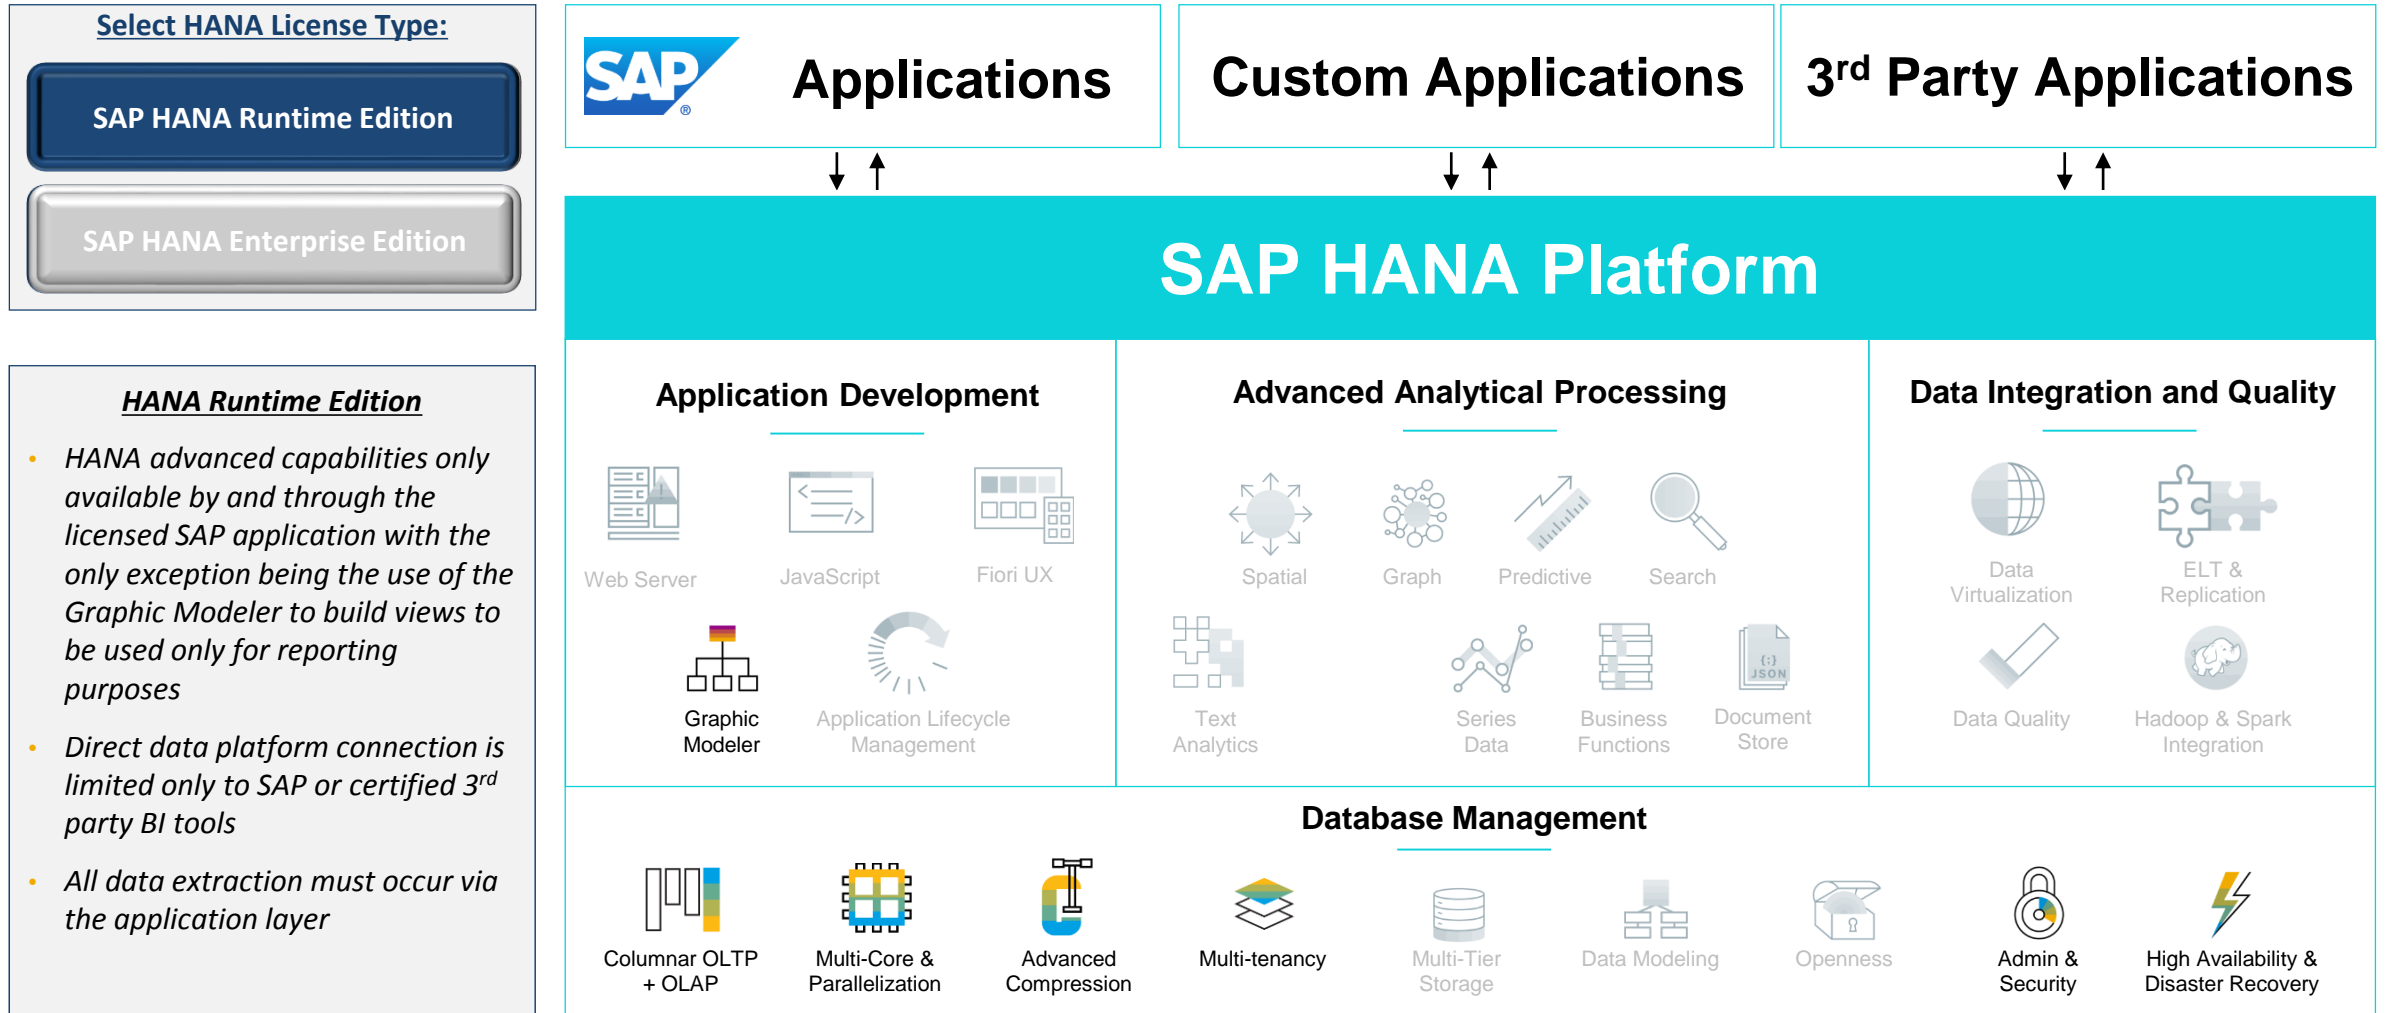

Make IT Simple | Make Business Agile

With Octalpa VDI solution you can mitigate

- ✓ High Risk in Information Security
- ✓ High Management Cost
- ✓ Environmental Disaster Impacts

HANA Capability Comparison

- Role-Tailored, pre-defined data cubes
- Dashboard views with KPIs
- Self-service reporting

Human capital management

- Core Human Resource Management
- Talent management
- Workforce management
- Travel and expense

Web Hosting Service

Flexibility | Pricing | Security and Reliability | Speed and Simplicity

Linux based Web Hosting

When it comes to the operating system for affordable web hosting, Linux and Windows both want to have a bigger share of the pie. The open source and proprietary platforms have differing strengths and weaknesses, and the services offered cater for the specific needs of online businesses.

However, Linux servers are extremely attractive to Internet entrepreneurs and publishers.

Windows based web Hosting

This platform seamlessly integrates with all kinds of Microsoft applications and as there are many out there, it becomes important, at times, to ensure compatibility with Windows platform to run the web apps.

Another important advantage is that both ASP generated pages and database generated pages can be used along with other parts of FrontPage. This is something not that possible in case of Linux; you can use FrontPage but not ASP generated and database-generated pages.
